Get The Most Radio Value

In radio, as in all other things there is an accepted standard—Westinghouse. Just as the word "Sterling" on silver defines a definite unvarying quality, so "Westinghouse" on a radio set carries the assurance of most radio value.

Model 57 illustrated above is the biggest value in radio. Contains all the features of any set at double the price. One dial control makes it the simplest to operate. Uses the newly perfected UX-201-B radiotrons, consequently operating costs are cut in half. For total quality, volume and selectivity, it sets a new standard for receivers in the moderate price class. The price, without tubes is only \$78.00.

You are missing a great deal of life if the great artists who are broadcasting to millions this winter are not being heard by you. We will gladly demonstrate the 57 in your home without cost or obligation. Please us to-day for an appointment.

H. K. Whiston Addresses Large Audience in Oyen Theatre

Municipal Hospitals are no longer an experiment—Those now operating in the Province are financially sound and doing great work.

There was a good attendance at the public meeting held in Oyen Theatre last Saturday afternoon, under the auspices of Oyen District Builders Association, when Mr. H. K. Whiston, superintendent of hospitals in the department of public health at Edmonton, gave an interesting two hour talk on "Municipal Hospitals." While the speaker's remarks necessarily dealt largely with statistics, at no time did he lose the interest of his audience, who gave him an attentive hearing throughout his address.

Referring to the eighteen municipal hospitals now in operation in the province, each of which is meeting its financial obligations and building up healthy surpluses, Mr. Whiston said the experimental stage was past, and the people of this district, in endeavoring to establish a municipal hospital at Oyen, were using sound judgment and showing a true community spirit.

Who was the father of the municipal hospital scheme? It never had a father! The movement was started by the youth of the prairie, who justly demanded better rural hospital facilities.

The speaker advised for this district an area of 25 township. Rural areas would be taxed approximately 3 cents per acre, while in the village, a minimum tax of \$6.00 per parcel would be imposed. This tax would be hospital insurance for the taxpayer, his family and family help, by which they could receive treatment at the rate of ONE DOLLAR A DAY, including drugs, dressings and all incidentals. The scheme would be financed by debentures for an amount to cover the cost of building and equipping the hospital, spread over a period of 20 years. Asked what this amount would be, the speaker said about \$35,000.

The three essentials for any community are the church, the school and the hospital, and of the three, Mr. Whiston would place the hospital first—the inference being, that with healthy and happy citizens, the school and church would naturally be present to look after the mental and spiritual needs of the people.

Referring to the depopulation of this and other districts in the province, and the various schemes to encourage immigration, what could be a better policy than insuring the offspring of parents now on the land—the finest type of immigrant—the best possible opportunity for a fair start in life, and affording the mother the maximum of care and comfort who is entitled to. This is precisely what a municipal hospital would do at a minimum of cost.

One of the many statements made by Mr. Whiston, based on statistics compiled by his department, that staggered his audience, was the fact that the average hospital case (other

Sale Of Forest Products Is Big Factor In Keeping Trade Balance With U. S.

Canada's far flung line of forest industries stands out as perhaps the most striking feature of the Dominion's industrial landscape.

Only when one realizes what an enormous volume of commerce these forest industries support, and what a dominant role they play in keeping Canada's trade with the United States on a fairly even keel, can one clearly appreciate what a huge stake the Canadian people have in forest protection.

These hundreds of mills throughout the main supporting pillar of Canada's export trade with her neighbors to the south. The mounting sales of forest products alone have enabled the Dominion in recent years to keep her trade with the United States from becoming altogether lopsided. Last year Canada sold to the United States roughly \$242,000,000 worth of

Television and Radio New Perfected Device Makes It Possible To Both See And Hear Performers

The magic wand of science, passing over the factory of the General Electric Company, at Schenectady, N.Y., disclosed to a small group of radio engineers, scientists and newspapermen, a vision of the future of radio broadcasting—a future designed to bring to broadcast fans the sight as well as the sound of the radio performers.

Sitting in comfortable chairs in three Schenectady homes, several miles from the company's broadcasting station, the visitors were enabled both to hear and see the studio program.

Simple twists of the dial on the home television sets brought to them the minute reproduction of the characters who appeared before the microphone, even to the curl of cigarette smoke from their lips and the blinking of their eyes.

The sound of their voices was heard in the usual way through a loudspeaker supplementing the visual apparatus.

WILL TRY OUT NEW WHEAT Reward Will Be Tested By Saskatchewan and Alberta

Farmers

Experiments in the cross-breeding of wheat of different varieties that are carried on by experts on the staff of the Department of Agriculture of Canada have produced still another strain that is declared to be suitable for growth in the prairie section of the Dominion. This new strain, sited the Quebec Chronicle-Telegraph, is known as Reward wheat. It has been revealed that the sample of wheat which the Manitoba Agricultural College won a first prize at the Royal Winter Fair in Toronto was of the Reward variety. And, more recently, Hon. W. R. Motherwell, Minister of Agriculture, has disclosed that the sample of hard spring wheat with which Mr. Herman Treble, of Winnipeg, Alberta, won a first prize at the International Exhibition in Chicago was of the same variety.

Mr. Motherwell announced that a thousand bushels of the grain have been distributed to some four or five hundred farmers in Saskatchewan and Alberta to be tested on their farms and also, no doubt, to be multiplied so that larger supplies of it may be available as seed next year. The new wheat has been subjected to certain tests already on experimental farms, on the experimental plots of agricultural colleges and on the farms of certain seed growers. These tests are said by Mr. Motherwell to have shown that Reward has the strongest straw of possibly any known wheat, that it ripens earlier than Marquis wheat, but not quite as early as Genet, that it is less liable to rust infection than other varieties, and that it yields a flour "without spot or blemish."

Canadians Are Urged To Turn Their Gaze Northwards For Great Future Developments

Every Farm Potential Aerodrome

Vision Of The Aeroplane In Daily Use
On The Farms Of Western Canada

That aviation today is rapidly taking its place in the economical life of Canada, linking up airports and remote areas by fast aircraft which have a speed range from 70 miles to 200 miles per hour, disregarding the natural topographical barriers and eliminating time and distance, is the opinion of W. S. McCordell, a Canadian air pilot with much experience in flying in Western Canada. He points out that the era of aerial transportation may have a profound effect on the destiny of the Dominion and the remote areas now far from communication and contact with social centres may, through the medium of a network of airways, become in terms of time a few hours distant from the largest cities.

In view of the advent of the light aeroplane which costs no more than a good automobile, and in view of the mass with which flying can now be mastered the stretch of farms in Western Canada may be only a short hour or so away from the city landing ground; independently of the coming era of the aeroplane may carry the rural dweller over the sky lanes in the span of an evening, permitting him to attend the theatre and return again the same night. Certain areas which would ordinarily wait for economic conditions that will permit the construction of roadways, will find in the aeroplane a vehicle that will enable them to reach desirable centres.

All these possibilities and a host of others greatly affecting rural life hinge on the use of the aeroplane in the daily life of the people as a vehicle for fast travel. In the rural areas of Western Canada every farm becomes a potential aerodrome and every aerodrome a potential centre only a short flight away.

Plan Industries Fair

Everything Made in Great Britain
Almost everything Great Britain makes, from huge electrical equipment for power houses down to the daintiest jewelry, will be seen at the British Industries Fair, which is being held simultaneously in London and Birmingham from Feb. 20 to March 2, 1928.

The aim of the organizers is to make each section thoroughly representative of its own branch of British industry to establish the fair more firmly as an annual commercial event of first class importance—the manufacturer's means of launching new products and establishing new contacts, the trade buyer's means of keeping in touch with the latest developments in British production and of taking a complete survey of that section of it which interests him most without having to make a tour of the country.

Ship Live Cattle To Japan

Forty Head Obtained In Alberta Were In Prime Condition

Shipments of dressed beef in the half or quarter carcass have been exported to Japan from Vancouver for several years past and consignments of pure-bred and dairy cattle have also been made. But what is believed to be the first shipment of live beef cattle was made from Vancouver recently on the steamer Evriven by the Vancouver Livestock Exchange. The shipment consisted of 40 heifers, averaging 1200 lbs. each, which were obtained to get them in British Columbia. The animals, which will be slaughtered on arrival at Kobe, were had a rope on them since they were branded; the longshoremen had a lively time getting them on board and tied up in their stalls.

Ensure Safety

The trains on the Paris underground railways are being fitted with an ingenious invention by which it is made impossible for them to leave the station unless all the doors are closed and locked. No signal to start will be given by the guard; the simple press of a button. Unless everything is in order the electric motors will not respond to the starting-handle.

Tom: "How did you enjoy your automobile trip?"

Jim: "Wonderful! I saw three sign boards I had never seen before!"

The map of Canada is gradually being unveiled to the eyes of the world by the secrets that have hitherto lain hidden in that vast empire to the north of this part of the continent. They themselves up to investigation and research.

It is only within the last few years that Canadians have definitely turned towards the great possibilities for expansion of the Northland and have realized themselves that the popular belief that the Northern areas of their country are barren and uninhabitable is, like most popular beliefs, utterly erroneous. With a quiet determination they have tackled the problems of exploring and exploiting the territories beyond the 60th degree of latitude, and have within the past year committed themselves to spending many millions of dollars to development work in that part of the continent.

The establishment of post offices, police posts and customs houses in the Northern islands off the Canadian mainland has been steadily pursued; the most Northern administrative post in the world is that of the Royal Canadian Mounted Police at Sachs Bay, on Ellesmere Island, 700 miles south of the North Pole. There is no end to the surveys that are being made; the aeroplanes may carry the rural dweller over the sky lanes in the span of an evening, permitting him to attend the theatre and return again the same night. Certain areas which would ordinarily wait for economic conditions that will permit the construction of roadways, will find in the aeroplane a vehicle that will enable them to reach desirable centres.

All these possibilities and a host of others greatly affecting rural life hinge on the use of the aeroplane in the daily life of the people as a vehicle for fast travel. In the rural areas of Western Canada every farm becomes a potential aerodrome and every aerodrome a potential centre only a short flight away.

This force has for its duty the making of observations in daily flights over vast expanses of water in order to note the tidal conditions, currents, prevailing winds and all other elements that enter into navigation. Three air stations are located in the straits, one at Port Darwin at the extreme point of the Labrador Peninsula, the second at Wakeham Bay on the coast of the Labrador strait, and the third at Nottingham Island, in Hudson's Bay itself, at its western extremity.

The whole idea behind this is that the government should secure all information as to how navigation can be lengthened, for although the Hudson Straits have been navigated for three hundred years and at one time were the main highway to the Canadian West in the days of the old fur-trading companies, the developments of the last few years of traffic left that route far behind.

Linked up with these investigations is the difficult and more exacting career of the Hudson's Bay railway—a line which when completed, run from a point in Saskatchewan, near the Manitoba border, to Port Churchill on Hudson's Bay.

As originally planned the road was to be built by the Hudson's Bay Co. but after exhaustive investigation into the merits of the two terminals resulted in Port Churchill being decided on. It will lengthen the railway by nearly 100 miles, but the report of engineers who made a study of the situation indicates that Churchill has many natural advantages not enjoyed by Nelson and that, despite the 100 miles of railway building, the expenditure in the end will be smaller.

This line goes right into the heart of the Canadian West, bringing it only a few hundred miles from the sea coast. Exploration is being pushed forward. At the beginning of this year a small expedition will start out from Ottawa to study the mass of 15,000 square miles of territory which was discovered in 1927 set aside as a game sanctuary. This region lies between the Great Slave Lake and Chesterfield Inlet, near the junction of the Mackenzie and Thelon Rivers, and has been traversed by many exploring parties, but the region is so vast that much remains to be told of it.

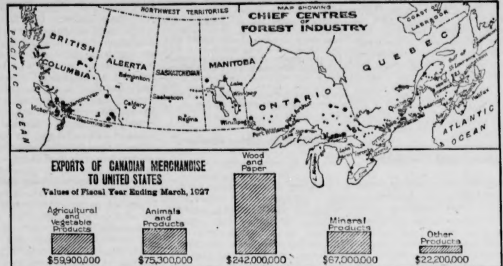

Canada's statements are urging their compatriots to turn their gaze northwards, and the next few years should witness some great developments in that portion of the American continent.

Girl: I want a nice book for an invalid.

Librarian: Something religious?

Girl: No, not now. He's convalescent.

Next to the United States, Spain claims the highest per capita wealth.

WHEN DAYLIGHT INCREASES

Lengthening Process Does Not Begin Until Middle Of January

W. G. Sibley writes as follows in the Journal of Commerce: When we remark that "the days are beginning to lengthen" we do not mean that any time is added to the twenty-four hours which constitute a calendar day, but that the period between sunrise and sunset increases. It is a popular belief that the lengthening begins on December 21 or immediately after, and that the increase begins at both ends of the day; that is, that the sun rises earlier and sets later. This is an error. The sun really begins to set later on December 14, but it does not begin to rise earlier until about the middle of January. For instance, in the northern states the sun rises at 7:18 and sets at 4:35 on December 21; and on January 12, rises at 7:22 and sets at 4:55. The day (forenoon) shortens four minutes in that period while the afternoon lengthens seventeen minutes, a net increase between sunrise and sunset of thirteen minutes. Not until after January twelve does the "day" lengthen at both ends. In the six months after December 21, sunrise speeds up from 7:18 to 4:21, increasing the length of forenoon two hours and forty-seven minutes; while the afternoon lengthens from 4:35 to 7:22, a gain of two hours and fifty-four minutes. This daylight increases five hours and forty-one minutes in the northern states.

Area Sown To Crops

The total area sown in Canada to the principal field in 1927, was 54,072,310 acres. Wheat occupied 22,402,104 acres; oats, 13,239,063 acres; barley, 3,605,713 acres, and the remaining 15,825,430 to a variety of other crops such as rye, flaxseed, corn, peas, potatoes, alfalfa, mixed grains, etc.

German Suits Discovered

Sunk in the Baltic off Wismar Harbor, when they came into collision during the war, two German submarines, from which there were only four survivors, have been discovered by fishermen. The latter have recently hauled in their nets portions of the wreckage and six skulls and other bones. Divers have been sent down and have reported the submarines to be as completely damaged.

A flea can jump 200 times the length of his body.

When a Sparrow Falls

Save the Birds and Destroy the Insect Pests

According to scientists, we are now on the verge of a struggle between the insect world and mankind. If each insect born lived until its natural death, it would not be long before birds and man would be bare and our source of food gone.

One bird devours hundreds of insects in a day, and millions in a lifetime. Millions of birds devour—the problem is too difficult to solve, but at any rate, they enable us to overcome the insects that remain. Worth remembering, isn't it? Particularly when the rifle of the small boy is pointed toward one of our feathered friends.

The world's output of petroleum for 1927 is estimated at 1,229,500,000 barrels.

West Pays Visit to East

More and more every year Canadians are exploring Canada. From the East—Montreal and Toronto—to the Canadian Pacific Railway sends special train right across the Dominion to Victoria, returning by routes different to those by which the outward journey was taken and thus giving passengers a more thorough idea of the land and cities of the west. In the other direction from west to east, the flow is almost equally great by reason of the large number of westerners who travel across Canada to take ship overseas for the Christmas holidays. But the "Survivance Francaise" is something different to this. In this case, some hundreds of French-Canadian settlers in the west make the trip back for a week or two to the land of their origin, the Province of Quebec. They arrived at the Windsor Street Station of the Canadian Pacific Railway in Montreal, and from there went to Sharnigan, Sherbrooke and Quebec city where they were entertained by local organizations, municipal, government and ecclesiastical bodies. Photographs show the season's party assembled in the Windsor Street Station just after their arrival in Montreal recently. The ladies in white were of the old French regime—a guard of honor drawn up to greet the party and come from the local Montreal school.

WORLD HAPPENINGS BRIEFLY TOLD

Charence Chamberlain's third attempt to capture the world's attention failed when he was forced down by ice forming on the wings.

Execution at Washington of a memorial statue of Samuel Compers, former president of the American Federation of Labor, is proposed under a bill introduced by representative Casey, Democrat, Pennsylvania.

Estimated for more than twelve hours by a full of coal in a level hundred of feet beneath the surface, nine miners at Hazelton, B.C., were rescued from their prison and brought out of the mine without a scratch.

The Earl of Athlone's term as Governor-General of South Africa, which began in 1924, will be extended for two years from Jan. 31, 1928, at the special request of the South African Government and with the approval of the King.

"The Repeating Magdalen" by Paul Veronese, a picture which exhibits the work of the great Venetian master in the first flush of his maturity, about the year 1550, has been purchased by the Canadian National Gallery.

The Alberta Wheat Pool has awarded a contract to the Canadian Construction Company, Ltd., and J. W. Stewart, Vancouver, for its terminal elevator at Vancouver, same to be completed and placed in operation by September 1, 1928, and having a capacity of 2,500,000 bushels.

One shot, the oldest Indian on the Blood Reservation, and the only remaining Indian that signed Treaty No. 7 in 1877, died at his home on the Blood Reserve, near MacLeod, Alta. He was 86 years of age and was buried near his home at the old agency on the reserve.

The official Gazette announces that the king has named Baron Byng of Vinay, former governor-general of Canada, a viscount. Viscount Byng received this honor in 1926, after an active military career which ended with the close of the war. He was governor-general of Canada from 1921 to 1926.

Air Route Via Yukon

Great Northern Airways Is Predicted By Dr. Thompson

The Yukon will some day be one of the main air routes of the world, providing an airway between Asia and Europe, if the prediction of Dr. Alfred Thompson, former minister of parliament for the Yukon, comes true. "The airway will be routed through the Northern part of British Columbia or the Yukon to the Aleutian Islands," said Dr. Thompson. "With Siberia to the north and China, Japan and the Philippine Islands to the south, the route will be free from fog, wind or snow. Airships will probably be the main means of travel, and stations will be established in the summer months in the Yukon when the rivers are open."

Future Of The North

The Hudson's Bay Railway is an absolute necessity to the north country, states Senator George Gordon of North Bay. "Even were it not possible to transport grain and other goods," he said, "it will still be an enormous factor in opening the mining country." He advised young men today to go north, where the future of Canada, to a great extent, lies.

Time when banks occupied all the best centers in our town and cities, but service stations seem to adorn them now. Perhaps that indicates where the money is going.

Foresees Atlantic Air Service

Domestic Secretary Predicts Tomorrow Will Be Northern Day

The Rt. Hon. L. C. M. R. Amery, British secretary of state for Dominion Affairs, foresees the day when Dominion will be the northern depot for a great British air line service across the Atlantic, north through the Peace River country and across the Rockies to Vancouver.

"It is not generally realized," he said, "and only the development of an airline across the Atlantic will show it, that Churchill is no more in London as in Montreal, that Toronto is as near to London as New York, and that practically all of Canada is nearer to London than to New York."

Experimental air line service will be commenced in the summer stated Col. Amery, but it will be three or four years yet before there is a regular air line service across the Atlantic and there is yet to be ascertained in measuring air distances for such a comparison of distances as the fog, the feasibility of an all year air crossing of the dangerous and forbidding territories of Iceland and Greenland.

Passenger and mail service will first be developed, followed by the carrying of precious cargoes such as gold, gems, and the like on which insurance charges are extremely heavy for each year of transportation.

One huge airship is being built by the British air ministry for commercial and military tests and another for passenger and criminal work is being built by Col. Duray for a private company.

Winnipeg Newspaper Union

The Winnipeg Newspaper Union, which was one of the great Venetian master in the first flush of his maturity, about the year 1550, has been purchased by the Canadian National Gallery.

The Alberta Wheat Pool has awarded a contract to the Canadian Construction Company, Ltd., and J. W. Stewart, Vancouver, for its terminal elevator at Vancouver, same to be completed and placed in operation by September 1, 1928, and having a capacity of 2,500,000 bushels.

One shot, the oldest Indian on the Blood Reservation, and the only remaining Indian that signed Treaty No. 7 in 1877, died at his home on the Blood Reserve, near MacLeod, Alta. He was 86 years of age and was buried near his home at the old agency on the reserve.

The official Gazette announces that the king has named Baron Byng of Vinay, former governor-general of Canada, a viscount. Viscount Byng received this honor in 1926, after an active military career which ended with the close of the war. He was governor-general of Canada from 1921 to 1926.

Air Route Via Yukon

Great Northern Airways Is Predicted By Dr. Thompson

The Yukon will some day be one of the main air routes of the world, providing an airway between Asia and Europe, if the prediction of Dr. Alfred Thompson, former minister of parliament for the Yukon, comes true. "The airway will be routed through the Northern part of British Columbia or the Yukon to the Aleutian Islands," said Dr. Thompson. "With Siberia to the north and China, Japan and the Philippine Islands to the south, the route will be free from fog, wind or snow. Airships will probably be the main means of travel, and stations will be established in the summer months in the Yukon when the rivers are open."

Future Of The North

A CANADIAN RIVER THAT LOSES ITSELF

Maligne River, In Jasper National Park, Has Interesting Feature

A river that loses itself so completely that no trace of its course can be found for several miles, is one of the interesting features of Jasper National Park, Alberta, which, with an area of more than 5,000 square miles, is the largest national playground in the world. The name of this river is the Maligne. It is a river that is given to it because where it joins the Athabasca there is a ford which was much feared by the trappers and voyageurs of early days in western history.

The Maligne River joins its source in Malaga Lake, about thirty-two miles from its confluence with the Athabasca. Maligne Lake is about fourteen miles long, more than a mile wide and the largest glacial fed body of water in the Canadian Rockies. From this lake the Maligne River flows swiftly down-hill for about fourteen miles to supply into Maligne Lake, a body of water four miles long and from a half to a mile wide. This lake, in some places, reaches a depth of 150 feet.

Out of this lake there is no known outlet. At the foot of it and for a mile or so below there is the dry course of what was once a river. But this bed is dry and there is neither sight nor sound of water in or near it. After about a mile, a trickle of water makes its appearance and within a comparatively short distance a river is once more flowing through the valley. This is again the Maligne River, although from this point to the Athabasca, the volume of water is never so great as that which flows into Medicine Lake. A mile above the Athabasca River, the Maligne turns itself down into a great canyon, hundreds of feet deep and, in places, less than a yard wide at the top.

London-Dublin Air Service

World Out Journey From Ten To Four Hours

An air service between London and Dublin is the object of negotiations now in progress between Imperial Airways, Limited, and the Air Department of the Irish Free State. Passengers would fly from London to Liverpool in air expresses. At Liverpool they would change from land-plane to a 16-passenger flying-boat. The aerial journey should be accomplished in about four hours, compared with ten hours by boat and train.

Some people are proud of their past—probably because it is past.

SUNDAY SCHOOL LESSON

JANUARY 29

THE GROWING FAME OF JESUS

Golden Text: "The common people heard him gladly."—Mark 12:37.

Lesson: Mark 3:7-19. 6:12-52. Devotional Reading: Isaiah 60:1-5, 8, 9.

Explanations and Comments

1. Why the Crowd Followed Jesus, 3:7. Jesus' fame of His personality, His sermons and His miracles, Jesus withdrew with his disciples to the Sea of Galilee. The opposition of the religious authorities was growing, and at the same time Jesus was becoming increasingly popular with the masses. Great crowds followed Him, for His fame had gone throughout the land. Crowds came from Galilee and from Jerusalem, from Idumea and beyond Jordan; from the region of Tyre and Sidon. One day when the pressure upon Him of the throng was great, Jesus made his disciples secure a boat in which He could take refuge. It was the fame of Jesus as a wonder-worker which drew them. They knew about his wonderful cures and many afflicted ones pressed upon Him to touch Him. These afflicted with unclean spirits fell down before him crying, "Thou art the Son of God!" He tried to get them not to make Him known. Popular enthusiasm was dangerous for His cause; it might lead to an outbreak.

2. What attracted the crowds? His power to heal? Yes. His sermons? Yes. But above all it was Himself. It was His personality. It was the Christ that attracted the people. And isn't it true today that where Christ is held up to the people, there we do find the crowds, and there we do find the Christ taking her part in the life of the people?

Find Germ Of "Moon Blindness"

May Be Possible To Produce Serum To Stop Disease

Discovery of the bacteria which is believed to cause "moon blindness" in horses, and which results in the death of many valuable animals, was announced recently by Dr. Edward C. Rosenow, of the Mayo Foundation, Rochester, Minnesota. Speaking before the 29th annual meeting of the Society of American Bacteriologists, Dr. Rosenow declared that through tests and experiments he had found an organism which injected into animals produced symptoms identical to this disease.

Dr. Rosenow said if further tests corroborated his findings, it should be possible to produce a serum to stop the spread of the disease.

Manitoba Industries

Last year 22 new industries began operations in Winnipeg and district and 21 existing industries in the city and its environs enlarged their plants. It is estimated that the total value of the output of industrial plants in Manitoba in 1927, was about \$176,000,000.

The farthest north police station in the world is on Herschel Island on the Arctic Ocean, a post of the Royal Northwest Mounted Police.

There are men with whom an hour's talk will weaken one more than a day's fasting.

Many a reputation has been gained without merit and many a one lost without fault.

"A dime" was originally a tenth of a man's earnings paid as church dues.

A Bright Outlook For Dairying

Market For Dairy Products Developing In United States

While the Old Country has been looked upon as the principal market for export dairy products, the experience of the past few years would indicate that it is shifting in the direction of the United States. During the past fiscal year, which ended with March, 1927, the United States took practically one-third of its total exports of dairy products including cheese, milk, and cream. This is an increase of about 22 per cent. since 1919. Addressing the Western Ontario Dairyman's Association at their annual meeting held in London recently, Dr. J. A. Riddick, Dairy and Cold Storage Commissioner, pointed out that the proportion will be considerably larger during the present fiscal year. The increase is particularly noticeable in regard to cream, which is crossing the American boundary not only from Quebec and Ontario farms, but also from the province of Manitoba. Concluding his address, Dr. Riddick said: "It looks to me as though Canadian producers are very favorably situated with the great world's market which they reach in the United Kingdom, and with the largest consuming country in the world next door, a market which is rapidly increasing its imports and which must pay a premium on the world's price in order to fill its requirements. I do not know of any other important dairymaking country occupying such an enviable position."

Alberta's Big Wheat Crop

"It is Made That Alberta Produced More Wheat Last Year Than Saskatchewan"

It is contended that Alberta has now, for the first time in history, raised a larger wheat crop than Saskatchewan. The latest estimate of the North-West Grain Dealers' Association, as furnished by the Statistic Department, shows that in 1927 Alberta had 1,757,000 acres of wheat, which, at the average yield of 27.4 bushels, gives a total of 109,346,000 bushels of wheat, with an average yield of 17 bushels per acre, raised 185,769,000 bushels. According to this estimate Alberta's wheat crop is 12,400,000 bushels greater than Saskatchewan's.

Egg Production Increases

Canadian Poultry Raising 35 Per Cent. More Eggs Than Formerly

The hen population of Canada is in a decidedly healthy condition, according to official reports laid before the sixteenth annual convention of the Canadian Produce Association, at Montreal.

Egg production in Canada has grown by leaps and bounds in recent years. It was announced by the president, H. B. Clemes, Toronto, that the increase must have been 35 per cent. Canadian people, moreover, were eating 25 per cent. more eggs than they were five or six years ago. The only problem, the president said, appeared to be that of exports.

Saskatchewan Coal

Expect That Production Will Reach 300,000 Tons This Year

Saskatchewan's output of coal with this year probably exceed 300,000 short tons, according to the latest report of the Federal Department of Trade and Commerce. During the first nine months of 1927, the output of coal in this province reached 250,951 tons, or about two per cent. of the total output of the Dominion. Saskatchewan has between 400 and 500 men employed in the coal mines. During September there were 112 surface workers and 323 underground men.

She—You have a magnetic personality. He—Maybe so. But I don't draw a big salary."

Alfalfa Growing On Range Lands

Vegetation Forage Crop To Supplement Native

At the present time many ranchers on the range lands of southwestern Saskatchewan and southern Alberta are faced with the alternative of either disposing of a portion of their live stock or growing some forage crop to supplement the native vegetation. In most cases the latter course has been adopted with the result that the production of forage crops has now become a definite problem in the ranching area. To aid in the solution of this problem the Dominion Department of Agriculture has published a circular on the "Production of Alfalfa On Range Lands of Saskatchewan and Alberta." It is pointed out in the circular that while the greater part of the range lands are too dry for the successful cultivation of many forage plants, most ranches have at least a small area which is more favorably located with regard to moisture than the rest of the land. Sometimes the small permit of irrigation from a nearby stream, in some places the waterable is near enough to the surface for deep-rooted plants such as alfalfa to take advantage of the sub-irrigation offered. On any of these areas alfalfa can usually be grown to advantage. The circular, which may be obtained from the Publications Branch of the Department of Agriculture, at Ottawa, gives concise information on the growing of this valuable forage plant.

Boon For Glove Layers

People Can Purchase Old Ones In London Store

So many right hand gloves are lost in the London underground railway that a business has grown up where old gloves may be purchased to match the remaining one. Forty-two and gloves were left in the underground and tube trains during the last twelve months.

Unbelievable figures next in the figures announced by the "palace of carelessness," as the house where lost articles are assembled is called. There were 12,000 umbrellas and 600 canes. The lost articles are kept six months, and, if not claimed, are sold.

Fisheries Leading Position

Canada's fisheries carried on in the waters of two oceans, the Atlantic and the Pacific, and upon a system of great lakes and inland waters, stand in both quantity and value among the leading fisheries of the world.

Music printed on dark green paper, with the notes and staff in white, is being used to reduce eye strain.

Anticipates Large Population

Extension In Mining Activities Means Growth For Dawson

The past season in Dawson has been the most active in ten years and it is predicted that within two or three years, owing to increased mining activity, there will be a larger population there than during the boom days of the late nineties, when gold was first discovered in the Klondike. Every man who could swing a pick and shovel was working in the Yukon district during the past summer, and, as a consequence, they have money enough to buy their winter's outfit and finance them to the spring, when they will be able to resume mining. United States interests are quietly acquiring numerous gold and silver claims in the Mayo-Keno Hill area and important developments are anticipated in that field soon. While most of the mining in the Yukon country, so far as production is concerned, is in the hands of a few big corporations and the placer operations are carried on largely by dredger, it is expected more independent operators than ever will be in the field next year.

A Satisfactory Ratio

Used Silage and Oak Straw For Feeding Lamb

To compare the value of hay and a combination of straw and corn silage in feeding lambs, a test was recently carried out at the Brandon, Manitoba, Experimental Farm. The lambs used in the experiment were divided into two lots, one lot being fed hay and a grain ration made up of equal parts of oats and barley, fed at the rate of 15 pounds per animal per day, while the other lot was fed the same grain ration in conjunction with oak straw and silage.

The result of the experiment shows that silage and oak straw together with a small grain allowance make a satisfactory ration for fattening lambs. The lambs fed this made some what larger gains than the others but the cost of feed per pound of gain was 40 per cent. higher.

Mother-in-Law—"The doctor said I was all run down and needed strength. I take two now. Now, I don't want to take two more. How big a dose do you recommend?"

Son-in-Law (hopelessly)—"I wouldn't take more than a teaspoonful to begin with."

It takes 1000 days for light from Alpha Centauri, the nearest star, to reach the earth.

Deplores Passing Of Personal Physician

Bural Districts Would Feel It More Than Others

In a speech before the National Council Congress, which was held at New York, Dr. Morris Fishbein deplored the passing of the personal physician. Under existing conditions, he said, the skilled practitioner and the specialist are being transformed into medical machines, while the advantages of our modern hospital system are being lost. He deplored the deprofessionalization of the patient. Dr. Fishbein might have extended his remarks to apply to the country doctor. Even more than the city, the passing of personal physicians would be a cause for the deepest regret in our rural districts. Yet there is a tendency in this direction. It is hard for country districts to get doctors who measure up to the standards which they rightfully demand, for the type of man who used to be content with a country practice is being drawn into the city, lured there, not only by hope of fame and fortune, but also by the opportunities for advancement in the practice of his profession. It is a problem which has already reached the concern of the American Medical Association.

The country doctor, driving day and night on his long rounds in all kinds of weather, has always been a romantic figure of American life. He is to the outstanding member of his community, friend and adviser to all his neighbors as well as their physician. He is a man whom the country cannot afford to lose. Certainly some physicians to a service so vital to our National well-being.

Beet Growing Expands

Alberta Farmers Are Favoring Beet Production More Strongly

Taber-Barnwell beet growers have after considering every phase of the beet industry, gone on record as not being beet producers more strongly than ever. As a result of crop-sharing contracts many settlers have made loans in the beet-growing industry permanently for the purpose of raising beets and assisting in the harvesting. Alberta farmers are appreciative of the fact that the beet value of pulp and molasses to livestock and the demand for these by-products is very strong with every available ton of beet pulp being bought up by beet growers.

The boundary line between the United States and Mexico is 1,744 miles long.

MAY BECOME BIG INDUSTRY

Development Of Reindeer In Alaska Would Bring Canada

A Large Revenue

Reindeer are now being used to herd vast numbers of reindeer in the big Arctic stock farms, according to Alaska, pioneer of the reindeer industry in Alaska. "It's a new idea and it's not being practiced regularly, but herding by aerolines seems feasible," said Mr. Lomen. "Our head herdsman went out recently and in two hours accounted for a week's work of several men."

There is room for 12,000 reindeer in the Northern tundras of Canada, in the opinion of Mr. Lomen, who added that such a vast herd would be worth \$50,000,000. "It could be done in fifty years," he said. "If Canada started now in a very modest way."

"If Alaska we have room for about 4,000,000 head and we hope to have that number within ten years," said Mr. Lomen. "That will mean an annual revenue for our company of close to \$20,000,000."

"Development of the reindeer on a big scale in Alaska would be a tremendous boon for the Dominion. It would provide employment for the nomadic Eskimo tribes and give the country a steady revenue from a vast territory that at present contributes little to the nation's prosperity."

Alaska is also fortunate enough to export the most to various parts of the Empire. There would be no competition in this vast market, as the Alaska House of Representatives sell the product in the United States. Reindeer meat is not sold in competition with beef, mutton and other standard meats, but as a supplement to the diet. It has been introduced into England from Norway, but not in large quantities.

"Reindeer," continued Mr. Lomen, "are the world's oldest domestic animal and are believed to have come from the North of China. They were introduced into Alaska to provide food and clothing for the Eskimo, and they have been an important factor in the development of the Eskimo. Reindeer skins earn a good living as herdsmen, or operate small herds of their own."

Old Custom Passing

Indian Weddings At Frontier Post Are Becoming Modern

Albert Bay, B.C., is one of the few places in Canada where weddings are carried out by the Indian. The ceremony is in accordance with the ancient ritual of pre-palace days. Such a ceremony was held recently when the daughter of Mr. Alfred, married James Seved, of Village Island.

But today the wedding ceremonies are largely limited with the bridegroom and about all that remain of the old marriage service are the dances. The festivities opened with two or three Indian dances. The bride was danced by the mother of the groom in front of the bride. This was a dance of gratitude, supposedly to thank the women's pleasure at receiving the bride into the tribe.

Even the dances seldom form a part of the Indian wedding now. The picturesque features of the old-time ceremony have been banished almost entirely. In place of the pulchritude and festivity there was a simple orchestra led by the village schoolmaster and a six-tier wedding cake.

Buying More Canadian Cattle

More than \$500,000 worth of cattle from the farms of the province of Alberta were exported to the United States between July last and November 30, 1927, according to the report of the American Consul at Calgary. The shipments include some 12,000 head, comprising stockers, feeders and butcher cattle. The American markets at the present time are very inviting to stockmen in Western Canada and shipments have shown greater activity during the past six months than in any similar period since 1922.

First Aerial Taxi Woman

Great Britain's first aerial taxi woman has just passed the tests for a pilot's certificate, and she is now ready to take fares anywhere for \$12 an hour. Her name is Miss O'Brien and she is the daughter of Sir Tim O'Brien. Her aerial taxi, which is her own property, is a light Moth.

Sweet Young Visitor

"The young man I was just talking to told me he was one of the stockholders of the ranch."

Ranch Foreman

"That's right, miss. He's the guy that holds the sheep while the boys shear 'em."

A satisfactory system of paving in France is hollow square blocks of cast iron, embedded in concrete.

Runs Into Millions

Experts Have Figured Up Yearly Waste In England

Experts have been busy showing us how much money we waste in a year, says an English writer. Starting with cigarettes, they tell us that out of a population of over 40 million, at least ten million men and women smoke on an average ten cigarettes a day, and waste not less than one-fifth of each cigarette. Thus an equivalent of twenty million cigarettes is wasted daily. At a cost of one shilling for twenty, the yearly waste is nearly £18,000,000.

The habit of putting salt on the side of the plate instead of sprinkling it food means that one spoonful in two is wasted. As practically all the inhabitants of the British Isles use table salt there is a yearly loss of 50,000 tons, worth £5,000,000.

Waste in matches is amazing. Quite three-quarters of the wood used in the manufacture of matches is wasted, assuming that no more than ten million people each use two boxes a week, approximately 1,000 tons are scrapped every year. If the wood were collected, it might prove invaluable in the manufacture of useful products such as excelsior and paper pulp.

Amateur photographers throw away used hypodermic syringes. One picture-making man saves £375 a week from his syringes. What must the amount wasted in hundreds of dark rooms in Britain every year?

Bargains Hoarded Fifty Years

Woman In England Hoard Things Picked Up At Sales

A house in London, England, has been revealed by the death of its spinster owner to have been in possession of an assortment of oddments picked up during 50 years at bargain sales. Miss Hannah Baldwin, who owned it, disappeared in love in early life, lived in seclusion there for half a century, eventually finding her only solace in attending sales and purchasing anything which took her fancy. As a result, her house became a veritable museum of miscellaneous articles, many with the sales tags still attached and all gray with successive layers of dust. Amassed with elaborate care, she had lived for more about she had lived for years without a fire and with a broken-down chair for a couch. Her bed was buried beneath a weight of remnants, and she had hidden by incredible quantities of household oddments—collected in the hope that they would one day prove of use. They were never used and now, after fifty years, they are out of date.

Raising Of Bacon Hogs

Improvement Found In Quality Of Bacon Hogs In 1927

In a recent statement issued by the Dominion Live Stock Branch, commenting on the present situation of the live stock industry, it is pointed out that the spite of the present general depression of the world's swine and bacon trade there was a continuous marked improvement in the type and quality of hogs sold off in Canada in 1927. A feature of the live stock movement in the year just closed was a very appreciable increase in the production of bacon hogs. The general situation is therefore quite encouraging in that it proves the capacity of our swine industry to flourish even during a period of market depression. To no small extent this continued improvement in the industry is due to the work done by the Federal Department of Agriculture in promoting the raising of bacon hogs among farmers in all parts of the country, where hog raising can be successfully carried on.

Price Is Expert Skater

The Westminster Gazette, in a dispatch from Melton Mowbray, says the Prince of Wales showed his democratic side in a spirit of the present general depression of the world's swine and bacon trade there was a continuous marked improvement in the type and quality of hogs sold off in Canada in 1927. A feature of the live stock movement in the year just closed was a very appreciable increase in the production of bacon hogs. The general situation is therefore quite encouraging in that it proves the capacity of our swine industry to flourish even during a period of market depression. To no small extent this continued improvement in the industry is due to the work done by the Federal Department of Agriculture in promoting the raising of bacon hogs among farmers in all parts of the country, where hog raising can be successfully carried on.

Prize Is Expert Skater

The Westminster Gazette, in a dispatch from Melton Mowbray, says the Prince of Wales showed his democratic side in a spirit of the present general depression of the world's swine and bacon trade there was a continuous marked improvement in the type and quality of hogs sold off in Canada in 1927. A feature of the live stock movement in the year just closed was a very appreciable increase in the production of bacon hogs. The general situation is therefore quite encouraging in that it proves the capacity of our swine industry to flourish even during a period of market depression. To no small extent this continued improvement in the industry is due to the work done by the Federal Department of Agriculture in promoting the raising of bacon hogs among farmers in all parts of the country, where hog raising can be successfully carried on.

Recreating Old France at Quebec

Chateau Frontenac, where most of the guests at the ball stayed. Upper right: Lord and Lady Willington, as King Charles I. of England, and his Queen, Henrietta Maria. Lower left: Miss Yvette McKenna, debutante, for whom the ball was given, in the character of Madame Louise de France, daughter of Louis XIV.

back a little further and represented Charles I. of England and his Queen, Henrietta Maria. Premier Taschereau came out as Agassieu, Chancellor and Comptroller under Louis XIV., and Mrs. Taschereau went as Marie Antoinette, ill-fated Queen of France. Miss Yvette McKenna, the debutante granddaughter of Hon. N. Pendergast, for whom the ball was given, played Madame Louise de France, daughter of Louis XIV. In all some 1,100 guests came to the ball and, since every one had to take beforehand in what character he or she would appear, there was no difficulty in getting the result was quite the most brilliant function ever given in Quebec or probably any other city in America. Guests came from all parts of Canada and the Eastern United States, and the Chateau Frontenac was at capacity for some days beforehand to accommodate them.

In one of the most colorful and striking functions ever put on in this continent, it was reserved for the old city of Quebec to rediscover herself in the historic ball recently given in the two halls of the Legislative Assembly in the Ancient Capital. Although four hundred years of centuries and personalities were covered by the ball, it was the eighteenth century that was most prominently featured and it was mainly French historical characters who were shown. "Le Roi Soleil," was impersonated by the Hon. N. Pendergast, Lieutenant-Governor of the province; Lord and Lady Willington

Ottawa—A shipment of six bacon type pure-bred swine from Canadian farms to New Zealand has recently been made. Three of the hogs were Canadian type Berkshires from E. Eggleston, Ontario, and were prize winners at the Royal Fair. The other three were Tamworths from Ontario and Quebec breeders. This is the first year that hogs have been imported into New Zealand from North America since 1916. Other shipments are expected to follow shortly.

The annual dog-racing classic—the Eastern International Dog-Sled Derby—will again be run in Quebec City, February 20-22 next under the auspices of the Winter Sports Association of that city. It will cover 120 miles in the three days and already some of the best known mushers in the United States and Canada are entered for the race which carries a cash prize of \$1,000 and custody for a year of a handsome gold cup.

Calgary — More than \$500,000 worth of cattle from the farms of the province of Alberta were exported to the United States between July 1st and November 30, 1927, according to the report of the American Consul at Calgary. The shipments include some 12,000 head, comprising stockers, feeders and butcher cattle. The American markets at the present time are very inviting to stockmen in Western Canada and shipments have shown greater activity during the past six months than in any similar period since 1922.

Canadian Pacific Express, railway and steamships and finally an airplane were employed to carry two boxes of roses from Brampton, Ont. to Paris, France as a gift at Christmas. They were sent by Lt-Col. J. R. Madden of Toronto to Princess Carolyn de Fungy-Lucinge and to Countess Odon de Lubersac and only the heavy overcast that wore Great Britain at that time prevented them from being placed on Christmas morning. As it was, they arrived two days later, as fresh as though they had just been picked.

H. K. Whiston's Address

(Continued from page 1.)
dress, Mr. Whiston invited questions from his audience.

Mr. H. R. Chapin, president of the District Builders' Association, occupied the chair.

Following the meeting Mr. Whiston met delegates from the municipalities of Golden Centre, Bertawan, Cereal and Acadia Valley and outlined the preliminary work to be done before the question of a municipal hospital can be put to a vote.

(There will be another article dealing with the municipal hospital question in our next issue.)

Don't forget the District Builders' Dance on Friday, February 3.

Mrs. Robert Green, who underwent an emergency operation in Oyen Hospital last Monday, is making excellent progress.

WEDDING

RICHARDSON—WILLIAMS

The United Church Manse, was the scene of a pretty wedding Tuesday afternoon, January 24, when Miss Jessie Williams, eldest daughter of Mr. and Mrs. Jesse Williams became the bride of Mr. Robert Richardson. Rev. H. C. Woods officiated in the presence of a few relatives.

About Town and Country

The annual meeting of the Alberta Agricultural Fair's Association is slated to be held in Edmonton, commencing Monday, February 6. Mr. A. M. McQuarrie is delegate for the Oyen association.

Under instructions from Mr. C. Kulp, I will sell at public auction, his horses, farm machinery and household effects, at the farm of J. W. Snell on Sec. 22, Twp. 26, Rge. 5, (14 miles south-west of Oyen) on Tuesday, February 7. Lunch will be served. Sale to commence at 1 p.m.—B. H. Dial, Auctioneer.

Under the auspices of All Saints Women's Guild, a whist drive and dance will be given in the Masonic Hall on Wednesday, February 8.

The Young People's Club will meet in the United Church next Tuesday evening. Refreshments will be served following a program.

Mr. H. T. Lamont, formerly manager of the Bank of Hamilton in Oyen, is a town visitor to day. Mr. Lamont is en route to Wembley, Alta., where he is manager of a branch of the Canadian Bank of Commerce.

Mr. and Mrs. David Gibbs and 2 children of Lumsden, Sask., are the guests of Mr. and Mrs. M. G. Whitlock.

Mrs. Floyd Horne, who underwent a serious operation in Oyen Hospital some time ago, expects to leave that institution during the later part of this week.

During the last two weeks the weather has been pleasant and sunny. With the exception of this morning when the mercury was standing at 12 degrees below, temperatures have been above zero at 8 a.m. and in the afternoons only a few degrees below freezing point.

Mr. and Mrs. A. E. Johnson left this morning for Calgary where they will spend the remaining days of the week.

Two local rinks left this morning for Alaska to participate in the bonspiel which commenced to day in the border town. The personnel of the rinks is as follows: Art Wade, James Marshall, Walter Marshall and S. E. Trewin; R. H. Dial, Ray Anderson, K. Vein and George Langmuir.

The Bonspiel Committee acknowledges with thanks donations from the following citizens:
